The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the FET embodiment of claim 8 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The disclosure is objected to because of the following informalities: fig. 3 should be labeled as ~~—prior art—~~; in claim 1, last paragraph, "reducing" and "reduce" should read ~~—regulating—~~and ~~—regulate—~~respectively; in claim 6, lines 2-4, 'Zener' is misspelled three times.

Appropriate correction is required.

Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The last paragraph of claim 1 is worded poorly; for instance, it is not seen how a voltage would be applied to the driving transistor through the outputting transistor.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Caine. Refer to fig. 13 of Caine. An op amp having input terminals Vin and an output terminal Vout is disclosed including a differential input stage 1002 that may be read as the differential amplifying circuit claimed, output transistor 1354 for instance connected to the output terminal which may be read as the outputting transistor claimed. It is driven

by transistor 1348 which may be read as the driving transistor claimed according to a signal from the input stage which may be read as the control signal claimed. Then (insofar as understood) the diodes 1344,1346 may be read as the control signal regulating circuit claimed, as they are part of circuitry that keep transistor 1348 on (or off) when a predetermined threshold voltage V_{th} is crossed. See the disclosure of Caine at col. 22.
